Personal Information

I was born in 1996. Due to my family's job, I have been in different cities of Turkey at different times. When I met the computer in 2009, I started the software by wondering about the working logic of the computer. I made my first money from the software with a website I sold in 2011, and after that time I continued to work without interruption. For a while, I gave software training within GMKA to those who want to start new to software. Although I worked in the field of Backend in general, I also gained considerable experience in fields such as FE, DevOps, ML, AI. I see myself closer to working on the new BE side. But if I need to define it, I can define it as a FullStack.
